 The Soviet aircraft assembly plant at Tbilisi manufactures and assembles bodies for the most modern type of jet aircraft. The engines for these aircraft come from factories in the Urals. The daily output of the assembly plant in the autumn of 1947 was about one and a half aircraft a day. At this date the plant employed 1,000 Soviet workers and 250 PWs. The latter were not allowed to enter the main workshop, but performed odd jobs outside. 	- S	Sanitized Copy Approved for Release 2011/06/23 : CIA-
